Lucas Maciel

Software Engineer @Projeto CIn/Motorola | Python | Machine
Learning | Google Cloud Platform | Java | Spring | JavaScript
Brazil

Summary

A professional with solid experience in software development, test automation, and machine learning. My technical skills cover languages such as Java, Python, and JavaScript, with proficiency in frameworks like Spring and jQuery. I am an expert in using version control tools like Git and Gerrit, CI/CD automation with Jenkins, and project and ticket management with Jira. I have a strong command of software quality assurance methodologies, implementation of unit, integration, and performance tests, and system optimization, including both back-end and front-end.

During my time as a Software Engineer at the CIn Motorola Project, I led crucial initiatives that resulted in significant improvements in operational efficiency. I was responsible for addressing over 150 tickets that impacted thousands of users, delivering essential new functionalities and fixes.

Furthermore, I optimized the creation of over 5000 test case executions, reducing generation time by 20 minutes, and was instrumental in the design and maintenance of modular plugins for Jira, extending its functionalities and offering customized solutions. My expertise contributed to the development of scalable back-end services and dynamic front-end interfaces, ensuring high availability and a smooth user experience. Previously, as a Test Engineer in the same project, my work focused on elevating quality and automation standards.

I developed and implemented over 90 Selenium automations, significantly expanding test suite coverage and accelerating the feedback cycle in CI/CD environments. My contribution also included the creation of 13 automated REST API tests to ensure consistency and the implementation of performance tests with JMeter, which were crucial for identifying and optimizing bottlenecks in critical applications, guaranteeing Motorola's scalability.

At the beginning of my career, as an RPA Developer at ItPower Software, I was responsible for transforming operational processes. I developed Robotic Process Automation (RPA) and Optical Character Recognition (OCR) scripts, resulting in workflow optimization and precise data extraction from PDF documents.

Experience

Projeto Cln/Motorola

3 years 1 month

Software Engineer

November 2024 - Present (1 year 7 months)

Recife, PE

- Handled over 150 development, improvement, refactoring, and maintenance tickets for Jira plugins, resulting in new functionalities and bug fixes that directly and indirectly impacted thousands of users.
- Worked with Java, Spring, dynamic HTML templates (Apache Velocity), CSS, and jQuery to enhance and develop over 30 different Jira plugins, significantly extending Jira's base functionality to address complex workflows and business rules from Motorola's teams.
- Optimized the creation and execution of test cases in test plans, streamlining the generation of over 5000 executions and reducing generation time by 20 minutes by using concurrent programming frameworks (ExecutorService and CompletableFuture) from Java.
- Reviewed +1370 commits from my team members.
- Performed complex queries and exploratory analyses on large volumes of heterogeneous data using BigQuery, optimizing the retrieval, processing, and interpretation of strategic information to support critical business decisions.
- Used PubSub asynchronous messaging system as a middleware to integrate data flows between different services.
- Leveraged Vertex AI large language models into various features, expanding natural language processing capabilities, content generation, and automation of repetitive tasks, thereby optimizing internal workflows.
- Implemented a Test Case recommender system in Test Plans by storing vectorized versions of text with semantic value in Faiss' indexes and doing a

vector similarity analysis to recommend the most relevant Test Cases for the context of a Test Plan.

- Developed an AI-powered notification system that fetches data from BigQuery and uses Google's LLM models to summarize the data and display the most relevant information for the users.

Software QA Intern

May 2023 - November 2024 (1 year 7 months)

Recife, Pernambuco, Brasil

- Performed comprehensive manual tests to validate new functionalities in Motorola's Jira instances, ensuring compliance with business requirements and software quality before release.

- Created robust automated tests using Selenium, JUnit, and Java, accelerating the feedback cycle and ensuring continuous regression in a Continuous Integration/Continuous Delivery (CI/CD) environment.

- Implemented over 90 Selenium automations to cover a wide variety of test cases, significantly increasing the scope of the automated test suite.

- Created 13 automated REST API tests to ensure the consistency of API responses across different requests.

- Solved and resolved software defects and issues related to Git practices, utilizing the Gerrit version control platform to maintain code integrity, standardization, and traceability.

- Configured jobs on the Jenkins automation server to orchestrate and optimize continuous build and test processes, contributing to the agility and reliability of the software development lifecycle.

- Manipulated complex HTTP requests in Postman to simulate and test API interactions, ensuring correct communication and expected behavior between different systems and microservices.

- Performed comprehensive tests on RESTful APIs using JavaScript, verifying functionality, security, and performance to ensure system stability and integration.

- Implemented detailed performance tests using JMeter, simulating user loads to identify and optimize performance bottlenecks in critical Motorola applications, ensuring scalability.

- Analyzed and interpreted test results to generate clear and concise reports, assisting the development team in efficiently prioritizing and correcting bugs and anomalies.

- Actively collaborated with developers and business analysts to understand requirements and use cases, improving test coverage and effectiveness.

IT POWER SOFTWARE

RPA Developer

June 2022 - January 2023 (8 months)

- Developed robotic process automation (RPA) and optical character recognition (OCR) scripts, resulting in the optimization of operational workflows and the precise extraction of relevant data from various PDF documents.
- Automated repetitive and rule-based tasks, generating productivity gains for teams and significantly reducing manual errors, freeing up resources for strategic activities.
- Implemented OCR solutions for intelligent document processing, enhancing the ability to read and interpret unstructured information and accelerating data flow.
- Actively collaborated with business teams to identify and analyze automation opportunities, translating complex requirements into viable and high-impact technical solutions.
- Performed continuous maintenance and enhancement of RPA robots, ensuring performance, robustness, and adaptability to changes in business processes.
- Conducted rigorous tests on developed scripts, ensuring the accuracy, reliability, and integrity of automations implemented in production environments.
- Documented automated processes and created scripts in detail, facilitating understanding, traceability, and future scalability of solutions.
- Optimized operational efficiency by reducing data processing time, allowing the company to reallocate resources to higher value-added activities.
- Created robotic process automations, or RPA. The main automations consist of extracting data from PDFs via OCR (Optical Character Recognition) and automatically filling this data into multiple web platforms of large insurance companies.
- Used Python and libraries such as Tesseract (OCR) and Selenium (RPA). Only a relatively basic knowledge was required.
- Significantly deepened my knowledge of the mentioned technologies, in addition to gaining experience in a corporate environment.
- Implemented automations for large insurance companies, such as Porto Seguro, Allianz, Sul America, Zurich, Bradesco, Tokio Marine, Mapfre, and Metlife.

Education

Universidade de Pernambuco

Bachelor's degree, Computer Engineering · (2020 - 2026)
